19. (Original) A process for the preparation of a compound of formula (I) as claimed in claim 1 or pharmaceutically acceptable salts or in-vivo hydrolysable esters thereof, which process comprises one of processes (a) to (j); and thereafter if necessary:

- i) removing any protecting groups;
- ii) forming a pro-drug (for example an in-vivo hydrolysable ester); and/or
- iii) forming a pharmaceutically-acceptable salt;

wherein said processes (a) to (j) are:

- (a) modifying a substituent in, or introducing a substituent into another compound of the invention by using standard chemistry;
- (b) reaction of a molecule of a compound of formula (IIa) with a molecules of a compound of formula (IIb) wherein X and X' are leaving groups useful in palladium coupling and are chosen such that an aryl-aryl, heteroaryl-aryl, or heteroaryl-heteroaryl bond replaces the aryl-X (or heteroaryl-X) and aryl-X' (or heteroaryl-X') bonds;

- (c) reaction of a compound of formula (IIIa) with a compound of formula (IIIb):

where X and X' are replaceable substituents and wherein the substituents X and X' are chosen to be complementary pairs of substituents known in the art to be suitable as complementary substrates for coupling reactions catalysed by transition metals;

- (d) reaction of a (hetero)biaryl derivative (IIIa) or (IIIb) carbamate with an appropriately substituted oxirane (wherein 0, 1, or 2 of R₁a'-R₁a'''' are substituents as defined for R₁a and the remainder are hydrogen) to form an oxazolidinone ring at the undeveloped aryl position;

or by variations on this process in which the carbamate is replaced by an isocyanate or by an amine or/and in which the oxirane is replaced by an equivalent reagent X-

C(R₁a')(R₁a'')C(R₁a''')(O-optionally protected)(R₁a''') or X-CH₂CH(O-optionally protected)CH₂R₁b where X is a displaceable group;

(e) reaction of a (hetero)biaryl derivative (IVa) or (IVb) to form an isoxazoline ring at the undeveloped aryl position;

or by variations on this process in which the reactive intermediate (a nitrile oxide IVa'' or IVb'') is obtained other than by oxidation of an oxime (IVa') or (IVb');

- (f) for HET as optionally substituted 1,2,3-triazoles, by cycloaddition via the azide (wherein e.g. Y in (II) is azide) to acetylenes, or to acetylene equivalents or optionally substituted ethylenes bearing eliminatable substituents;
- (g) for HET as 4-substituted 1,2,3-triazole compounds of formula (I) by reacting aminomethyloxazolidinones with 1,1-dihalo ketone sulfonylhydrazones
- (h) for HET as 4-substituted 1,2,3-triazole compounds of formula (I) by reacting azidomethyl oxazolidinones with terminal alkynes using Cu(I) catalysis to give 4-substituted 1,2,3-triazoles
- (j) for HET as 4-halogenated 1,2,3-triazole compounds of formula (I) by reacting azidomethyl oxazolidinones with halovinylsulfonyl chlorides at a temperature between 0 °C and 100 °C either neat or in an inert diluent.
